# Differential Cryptanalysis of Round-Reduced Simon and Speck 

Farzaneh Abed Eik List Stefan Lucks Jakob Wenzel

Bauhaus-Universität Weimar

FSE 2014
March 27, 2014

## Agenda

■ Motivation

- Simon and Speck
- Our Method

■ Results
■ Discussion

## Section 1

## Motivation

## Motivation

■ June 2013, two lightweight ciphers Simon, Speck by NSA
■ Intensively optimized
■ Performant in both hard- and software
■ No security analysis for both ciphers $\Rightarrow$ left as a task to the community

## Section 2

## Simon and Speck

## SIMON

■ Uses ARX construction

- Families of Feistel-network

■ Three simple operations: AND, rotations, XOR
■ State size $2 n$ and key size $k$, 10 family members

## SIMON (cont'd)

```
Require: \(\left(L^{0}, R^{0}\right)\{\) Plaintext \(\}\)
Ensure: \(\left(L^{r}, R^{r}\right)\{\) Ciphertext\}
    1: for \(i=1, \ldots, r\) do
    2: \(\quad L^{i} \leftarrow R^{i-1} \oplus K^{i-1}\)
        \(\left(L^{i-1} \lll 2\right)\)
3: \(\quad R^{i} \leftarrow L^{i-1}\)
4: end for
5: return \(\left(L^{r}, R^{r}\right)\)
```

Figure: SIMON encryption

## SPECK

■ Three operations: Addition, rotations, XOR
■ Support variety of block and key sizes, 10 family members
■ Similar to ThreeFish but much faster

## Speck (cont'd)

Require: $\left(L^{0}, R^{0}\right)\{$ Plaintext $\}$
Ensure: $\left(L^{r}, R^{r}\right)\{$ Ciphertext $\}$
1: for $i=1, \ldots, r$ do
2: $\quad L^{i} \leftarrow\left(L^{i-1} \ggg \alpha\right)+R^{i-1} \bmod 2^{n}$
3: $\quad L^{i} \leftarrow L^{i} \oplus K^{i-1}$
4: $\quad R^{i} \leftarrow\left(R^{i-1} \lll \beta\right) \oplus L^{i}$
5: end for
6: return $\left(L^{r}, R^{r}\right)$

Figure: SPECK encryption

## Section 3

## Method

## Why Differential Attacks

■ Slide: XOR of 1-bit constant with round keys
■ Linear: Difficulties to linearise AND
■ MITM: Fast diffusion in key schedule
■ Splice and Cut: Fast diffusion in key schedule

## Methods for Differential Characteristic and Probability

Twofold approach:
1 Matsui's Algorithm:
■ Finds the best $r$-round characteristic in depth-first manner

- Usse as reference trail for the Branch-and-Bound

2 Branch and bound (B\&B) Algorithm:

- Prunes the search
- Finds the optimal solution

## How to Apply Matsui and B\&B

■ Start from the input difference $\alpha$
■ Propagate in forward and backward direction

- Collect all output difference $\alpha \rightarrow \beta$ and their $P$

■ Use as starting point for the next round in depth-first manner

## How to Apply Matsui and B\&B (cont'd)

■ Searching all possible paths is infeasible

- Prune the search tree

■ Define $P$ threshold
■ Consider pairs with $P \gg 2^{p-t h r e s h o l d}$ and
■ maximum number of characteristics

## Branch-and-Bound

## Differential Attacks Procedure

1 Collect text pairs
2 Filter out pairs
3 Filter out round keys
4 Test all remaining key candidates by brute-force

## Differential Attacks (cont'd)

1. Collection phase:

1 Collect plaintext pairs ( $P_{i}, P_{i}^{\prime}$ )
2 Obtain $\left(C_{i}, C_{i}^{\prime}\right)$ ciphertext pairs from encryption oracle

## Differential Attacks (cont'd)

2. Filtering phase:

3 Derive all pairs ( $C_{i}, C_{i}^{\prime}$ ) with the correct difference
4 Store all correct pairs in a list

## Differential Attacks (cont'd)

3. Key Guessing phase:

5 Guess some key bits
6 For all ciphertext in the list partially decrypt ( $C_{i}, C_{i}^{\prime}$ )
7 Test for the match, if yes increment the counter
8 Output key candidates with highest counter

## Differential Attacks (cont'd)

4. Brute-force phase:

9 Identify correct values for all remaining keys

## Section 4

## Results

## Differential Attacks on Simon

| Cipher | Total <br> Rds | Attacked <br> Rds | Data <br> (CP) | Memory <br> (Bytes) | Success <br> Rate |
| :---: | :---: | :---: | :---: | :---: | :---: |
| SIMON32/64 | 32 | 18 | $2^{31.2}$ | $2^{15.0}$ | 0.63 |
| SIMON48/k | 36 | 19 | $2^{46.0^{\dagger}}$ | $2^{20.0}$ | 0.98 |
| SIMON64/k | 42,44 | 26 | $2^{63.0}$ | $2^{31.0}$ | 0.86 |
| SIMON96/k | 52,54 | 35 | $2^{93.2}$ | $2^{37.8}$ | 0.63 |
| SIMON128/k | 68,72 | 46 | $2^{125.6}$ | $2^{40.6}$ | 0.63 |

- CP = chosen plaintexts
- $\dagger=$ chosen ciphertexts

## Differential Attacks on Speck

| Cipher | Total <br> Rds | Attacked <br> Rds | Data <br> (CP) | Memory <br> (Bytes) | Success <br> Rate |
| :--- | :---: | :---: | :---: | :---: | :---: |
| SPECK32/64 | 22 | 10 | $2^{29}$ | $2^{16}$ | 0.99 |
| SPECK48/k | 22,23 | 12 | $2^{45}$ | $2^{24}$ | 0.99 |
| SPECK64/k | 26,27 | 15 | $2^{61}$ | $2^{32}$ | 0.99 |
| SPECK96/k | 28,29 | 15 | $2^{89}$ | $2^{48}$ | 0.99 |
| SPECK128/k | $32-34$ | 16 | $2^{116}$ | $2^{64}$ | 0.99 |

## Rectangle Attack on Speck

| Cipher | Total <br> Rds | Attacked <br> Rds | Data <br> (CP) | Memory <br> (Bytes) | Success <br> Rate |
| :---: | :---: | :---: | :---: | :---: | :---: |
| SPECK32/64 | 22 | 11 | $2^{30.1}$ | $2^{37.1}$ | $\approx 1$ |
| SPECK48/k | 22,23 | 12 | $2^{43.2}$ | $2^{45.8}$ | $\approx 1$ |
| SPECK64/k | 26,27 | 14 | $2^{63.6}$ | $2^{65.6}$ | $\approx 1$ |
| SPECK96/k | 28,29 | 16 | $2^{90.9}$ | $2^{94.5}$ | $\approx 1$ |
| SPECK128/k | $32-34$ | 18 | $2^{125.9}$ | $2^{121.9}$ | $\approx 1$ |

## Comparison for SIMON

| Cipher | Total Rds. | Biryukov |  | Alkhzaimi |  | Us |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Rds. | $\operatorname{Pr}$ | Rds. | $\operatorname{Pr}$ | Rds. | $\operatorname{Pr}$ |
| SIMON32/64 | 32 | 14 | $2^{-30.94}$ | 16 | $2^{-29.48}$ | 18 | $2^{-30.22}$ |
| SIMON48/k | 36 | 15 | $2^{-42.11}$ | 18 | $2^{-42.6}$ | 15 | $2^{-43.01}$ |
| SIMON64/k | 42,44 | 21 | $2^{-61.17}$ | 24 | $2^{-62.0}$ | 21 | $2^{-61.01}$ |
| SIMON96/k | 52,54 | - | - | 29 | $2^{-87.5}$ | 35 | $2^{-92.2}$ |
| SIMON128/k | 68,72 | - | - | 40 | $2^{-124.8}$ | 46 | $2^{-124.6}$ |

## Comparison for SPECK

| Cipher | Total Rds. | Biryukov |  | Us |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  |  | Rds. | Pr | Rds. | Pr |
| SPECK32/64 | 22 | 9 | $2^{-31}$ | 10 | $2^{-30.99}$ |
| SPECK48/k | 22,23 | 10 | $2^{-43.87}$ | 12 | $2^{-40.55}$ |
| SPECK64/k | 26,27 | 13 | $2^{-57.70}$ | 15 | $2^{-58.9}$ |
| SPECK96/k | 28,29 | - | - | 15 | $2^{-83.98}$ |
| SPECK128/k | $32-34$ | - | - | 16 | $2^{-111.16}$ |

## Section 5

## Conclusion

## Conclusion

■ Differential attacks on up to half of the rounds for SIMON and SPECK

- SIMON is highly vulnerable against differential cryptanalysis

■ Any new analysis on addition-based ARX would be a threat to SPECK
■ ThreeFish, 2010, only 24/72 rounds up to now, SPECK, 2013, up to half

## Differentials for Simon32/64

| Rd. | $\Delta L^{i}$ | $\Delta R^{i}$ | $\log _{2}(p)$ | Rd. | $\Delta L^{i}$ | $\Delta R^{i}$ | $\log _{2}(p)$ |
| ---: | :--- | :--- | ---: | :---: | :--- | :--- | ---: |
| 0 | 0 | $\Delta_{6}$ |  | 8 | $\Delta_{4}$ | $\Delta_{2,6,14}$ | -6 |
| 1 | $\Delta_{6}$ | 0 | 0 | 9 | $\Delta_{2,14}$ | $\Delta_{4}$ | -2 |
| 2 | $\Delta_{8}$ | $\Delta_{6}$ | -2 | 10 | $\Delta_{0}$ | $\Delta_{2,14}$ | -4 |
| 3 | $\Delta_{6,10}$ | $\Delta_{8}$ | -2 | 11 | $\Delta_{14}$ | $\Delta_{0}$ | -2 |
| 4 | $\Delta_{12}$ | $\Delta_{6,10}$ | -4 | 12 | 0 | $\Delta_{14}$ | -2 |
| 5 | $\Delta_{6,10,14}$ | $\Delta_{12}$ | -2 | 13 | $\Delta_{14}$ | 0 | 0 |
| 6 | $\Delta_{0,8}$ | $\Delta_{6,10,14}$ | -6 | 14 |  |  |  |
| 7 | $\Delta_{2,6,14}$ | $\Delta_{0,8}$ | -4 | 15 |  |  |  |
| $\Sigma$ |  |  |  |  |  |  | -36 |
| $\Sigma_{a c c}$ |  |  |  |  |  |  | -30.22 |

■ $\sum$ : the total probability of the full characteristic

- $\sum_{\text {acc }}$ : the accumulated probability of all found trails from start to the end

## Differentials for Speck32/64

| Rd. | $\Delta L^{i}$ | $\Delta R^{i}$ | $\log _{2}(p)$ | Rd. | $\Delta L^{i}$ | $\Delta R^{i}$ | $\log _{2}(p)$ |
| ---: | :--- | :--- | ---: | :---: | :--- | :--- | ---: |
| 0 | $\Delta_{5,6,9,11}$ | $\Delta_{0,2,9,14}$ |  | 6 | $\Delta_{15}$ | $\Delta_{1,3,10,15}$ | -2 |
| 1 | $\Delta_{0,4,9}$ | $\Delta_{2,9,11}$ | -5 | 7 | $\Delta_{1,3,8,10,15}$ | $\Delta_{5,8,10,12,15}$ | -4 |
| 2 | $\Delta_{11,13}$ | $\Delta_{4}$ | -4 | 8 | $\Delta_{1,3,5,15}$ | $\Delta_{3,5,7,10,12,14,15}$ | -6 |
